

16.7 FX Demo Logical Profile Does Not Prescribe Deployment Topology

[Go To FX Demo Logical Rules and Constraints](#)

The FX Demo Logical Profile defines FX logical structure, not deployment topology.

It does not prescribe centralised deployment, federated deployment, colocated execution, distributed execution, cloud deployment, on-premises deployment, hybrid deployment, multi-jurisdiction deployment, Kubernetes deployment, container deployment, or single-machine execution.

Deployment profiles define topology for a specific environment. Those deployment choices realise the FX Demo Logical Profile under selected operational constraints. They do not redefine FX logical [Nodes](#), FX logical [Communication Endpoints](#), FX [Runtime Planes](#), or FX logical information structures.
