

16.9 FX Demo Logical Profile Does Not Prescribe Governance Tooling

[Go To FX Demo Logical Rules and Constraints](#)

The FX Demo Logical Governance Model defines ownership, versioning, compatibility, change control, admission rules, and policy constraints at the FX logical profile level.

It does not prescribe a repository, workflow tool, requirements-management system, policy engine, rules engine, access control product, ticketing system, approval process, configuration service, registry, or runtime governance service.

Governance and implementation profiles select the mechanisms that realise FX logical governance. Those mechanisms support governance; they do not define the FX Demo Logical Governance Model.
