

4.1 Overview

[Go To Phase 0 Implementation Profile Overview](#)

The Phase 0 Implementation Profile / [Platform-Specific Model \(PSM\)](#) defines the first phase-specific implementation baseline for the FX Demo.

This profile maps selected elements of the Part 3 FX Demo Logical Profile to selected Phase 0 implementation technologies and implementation artifacts. It identifies how Phase 0 represents selected FX logical [Nodes](#), logical [Communication Endpoints](#), logical information structures, [Runtime Planes](#), interaction patterns, governance relationships, and [traceability](#) relationships in implementation form.

The Phase 0 Implementation Profile does not define the final implementation architecture for all development phases. It defines one controlled implementation profile for Phase 0. Later development phases may extend, refine, supersede, or replace this profile while preserving traceability to the applicable conceptual, logical, domain logical, and implementation artifacts.
