

6.2 Part 3 Working Baseline

Go To Phase 0 Implementation Preconditions

The Part 3 FX Demo Logical Profile must be in place as a working baseline before Phase 0 implementation begins.

The working baseline identifies the FX logical [Nodes](#), logical [Node Roles](#), logical [Communication Endpoints](#), logical information structures, [Runtime Planes](#), interaction patterns, governance relationships, [traceability](#) relationships, and logical requirements that Part 4 maps to implementation artifacts.

Phase 0 implementation work must preserve traceability to that baseline. A Phase 0 implementation artifact must identify the FX logical element, implementation concern, or supporting function it realizes or supports.

A later change to the Part 3 working baseline may require review of affected Phase 0 implementation mappings, [IDL](#) structures, [DDS](#) Topic mappings, generated types, Quality of Service (QoS) profiles, repository artifacts, scripts, and Developer Handbook rules.
