

7.1 Overview

[Go To Phase 0 Technology Selection and Implementation Context](#)

The Phase 0 Implementation Profile selects a limited set of implementation technologies and implementation artifact categories for the first FX Demo implementation baseline.

These selections provide the implementation context for Phase 0. They identify how selected FX logical [Nodes](#), logical [Communication Endpoints](#), logical information structures, [Runtime Planes](#), and interaction patterns map to implementation mechanisms. They do not define the final technology architecture for all future phases.

Phase 0 technology selections realize selected elements of the FX Demo Logical Profile. They do not redefine the Part 1 Conceptual Architecture, the Part 2 Logical Architecture / [Platform-Independent Model \(PIM\)](#), or the Part 3 FX Demo Logical Profile.
