

7.10 Phase 0 Technology Selection Summary

[Go To Phase 0 Technology Selection and Implementation Context](#)

The Phase 0 Implementation Profile uses the following selected implementation context:

- [DDS](#) provides the Phase 0 communication technology.
- [IDL](#) provides the Phase 0 data definition mechanism.
- Quality of Service (QoS) profiles provide the Phase 0 communication behavior controls.
- Generated types provide the Phase 0 implementation data artifacts.
- Python provides the Phase 0 hand-authored implementation language.
- Scripts provide the Phase 0 build and execution helpers.
- The repository structure provides the Phase 0 implementation organization.

These selections establish the Phase 0 implementation baseline. They realize selected FX logical elements without redefining them.
