

9.1 Overview

[Go To Mapping from FX Logical Communication Endpoints to DDS Topics](#)

This section defines how the Phase 0 Implementation Profile maps selected FX logical [Communication Endpoints](#) from the Part 3 FX Demo Logical Profile to [DDS Topics](#).

An FX logical Communication Endpoint identifies a platform-independent point of information exchange among FX logical [Nodes](#). A DDS Topic realizes the endpoint for the Phase 0 implementation context. The DDS Topic does not redefine the endpoint, the FX logical information structure carried by the endpoint, the [Runtime Plane](#) classification, or the participating FX logical Nodes and Node Roles.

The endpoint-to-topic mapping supports [traceability](#) from FX logical Communication Endpoints to DDS Topics and from DDS Topics back to FX logical Communication Endpoints.
