

11.5 Policy and Release Plane Realization

Go To Phase 0 Runtime Plane Realization

The Phase 0 implementation realizes the FX Logical Policy and Release Plane through implementation artifacts that evaluate release conditions and prepare authorized release information.

Policy and Release Plane realization includes:

- policy decision requests or policy evaluation triggers;
- policy decision production;
- release eligibility determination;
- redaction or transformation context where Phase 0 requires it;
- release package preparation;
- release obligation recording;
- authorized oversight consumption; and
- traceability from release artifacts to source information, policy decisions, obligations, and recipient context.

Phase 0 maps policy and release information primarily to DDS Topics such as `Policy.FX.PolicyDecision` and `Policy.FX.ReleasePackage`.

Policy and Release Plane artifacts govern external disclosure or controlled movement of FX information. Internal Data Plane availability does not authorize release. The Phase 0 implementation must preserve the distinction between internal FX information exchange and authorized external release.
