

12.11 Release FX Information to Oversight Participant

Go To Phase 0 Interaction Pattern Realization

The Release FX Information to Oversight Participant pattern realizes Phase 0 preparation and delivery of authorized release information.

The implementation participant performing the Release Control Role applies an FX Policy Decision, selects authorized information, applies required Phase 0 redaction or transformation where applicable, records obligations, prepares an FX Release Package, and publishes it to the release package DDS Topic for an authorized oversight participant or simulated subscriber.

Table 12-9: Release FX Information to Oversight Participant implementation realization.

Realization Concern	Phase 0 Implementation Treatment
FX logical interaction pattern	Release FX Information to Oversight Participant
Primary implementation participants	Policy and release implementation participant; oversight demonstration participant or simulated subscriber
Primary Runtime Plane	FX Logical Policy and Release Plane
Supporting Runtime Plane	FX Logical Audit and Provenance Plane
Input DDS Topic	Policy.FX.PolicyDecision and selected source information Topics where Phase 0 requires them
Output DDS Topic	Policy.FX.ReleasePackage
Primary IDL / generated types	FxPolicyDecision; FxReleasePackage; selected source-information generated types
Expected processing outcome	Implementation publishes an authorized release package with source references, recipient context, purpose, obligations, policy decision reference, producing participant, and timestamp.
Logging and exception handling	Denied release, missing policy decision, redaction or transformation failure, publication failure, and delivery failure follow the logging and exception-handling baseline.
Audit and provenance expectation	Release records preserve policy decision reference, released content reference, recipient context, obligations, producing participant, and timestamp.
Traceability expectation	Interaction traces to FX Policy and Release Node, Release Control Role, External Oversight Participant, Oversight Consumption Role, FX Release Package Endpoint, and FX Release Package.
