

12.2 Interaction Realization Principles

Go To Phase 0 Interaction Pattern Realization

The Phase 0 Implementation Profile applies the following principles when realizing FX logical interaction patterns.

Each interaction realization identifies:

- the FX logical interaction pattern it realizes;
- the implementation participants involved;
- the DDS Topic or Topics used;
- the IDL structures and generated types exchanged;
- the Runtime Plane or Runtime Planes involved;
- the expected processing outcome;
- the required logging and exception-handling behavior;
- audit and provenance expectations, where applicable;
- supporting scripts or configuration artifacts, where applicable; and
- the traceability relationship back to the Part 3 FX logical interaction pattern.

The mapping does not require every future interaction pattern to exist in Phase 0. Phase 0 realizes only the selected interaction patterns needed for the implementation baseline.
