

14.11 Generated Artifacts

[Go To Phase 0 Repository and Build Artifact Model](#)

Generated artifacts require explicit governance because they sit between governed definitions and executable implementation behavior.

Each generated artifact must identify:

- Source definition used to generate it
- Generator or generation process used
- Generation context or version
- Output location
- Regeneration policy
- Manual-editing rule
- Related IDL structure or other source artifact
- Related FX logical information structure where applicable

Generated artifacts must remain reproducible from governed source definitions. When regeneration changes a generated artifact, reviewers must be able to identify the source change, generator change, or configuration change that produced the result.
