

14.2 Repository Organization Principles

[Go To Phase 0 Repository and Build Artifact Model](#)

The Phase 0 repository organization applies the following principles.

Each repository location identifies:

- Artifact category it contains
- Implementation purpose of that artifact category
- Whether the artifacts are hand-authored, generated, configured, documented, or temporary
- Relationship to Part 3 FX logical elements where applicable
- Relationship to Phase 0 implementation mappings where applicable
- Applicable Developer Handbook rules
- Applicable review expectations
- Regeneration, cleanup, or exclusion rules where applicable

The repository must avoid mixing governed source artifacts, generated artifacts, temporary artifacts, and local developer artifacts in ways that obscure [Traceability](#) or review.
