

14.8 Documentation Directory Model

[Go To Phase 0 Repository and Build Artifact Model](#)

The documentation directory contains supporting implementation documentation for Phase 0.

Documentation artifacts may include the Phase 0 Developer Handbook, implementation mapping notes, repository usage guidance, generated artifact notes, script usage notes, configuration notes, [Traceability](#) tables, and review checklists.

Documentation supports implementation discipline and review. It does not replace the architecture, the implementation profile, or the Developer Handbook. The architecture defines the conceptual, logical, and implementation-profile relationships. Documentation explains how contributors apply those relationships in the repository.
