

15.11 Repository Workflow Requirements

[Go To Phase 0 Developer Handbook Requirements](#)

The Developer Handbook must define repository workflow requirements for Phase 0.

Repository workflow requirements must cover:

1. Approved repository structure
2. Baseline and non-baseline material
3. Branch or working-copy expectations where applicable
4. Generated artifact handling
5. Script execution expectations
6. Configuration changes
7. IDL changes
8. Review requirements
9. [Traceability](#) checks
10. Commit or contribution conventions
11. Cleanup rules
12. Exclusion rules for temporary or local artifacts

The repository workflow must prevent uncontrolled prototype code from entering the Phase 0 implementation baseline. It must also preserve the distinction among governed source artifacts, generated artifacts, temporary artifacts, local developer artifacts, and documentation artifacts.
