

15.6 Naming Convention Requirements

[Go To Phase 0 Developer Handbook Requirements](#)

The Developer Handbook must define naming conventions for Phase 0 implementation artifacts.

Naming conventions must cover:

1. Repository directories
2. Hand-authored source files
3. Implementation [Node](#) modules
4. Supporting modules
5. IDL files
6. IDL structures
7. Generated types
8. [DDS](#) Topics
9. QoS profiles
10. Configuration files
11. Scripts
12. Logging categories
13. Exception classes or error categories where applicable
14. [Traceability](#) artifacts

Naming conventions must preserve traceability where practical. Names should help reviewers recognize the relationship among FX logical elements, DDS Topics, IDL structures, generated types, implementation modules, scripts, and repository locations.
