

15.8 Logging Convention Requirements

[Go To Phase 0 Developer Handbook Requirements](#)

The Developer Handbook must define logging conventions for Phase 0 implementation artifacts.

Logging conventions must identify:

1. Required log fields
2. [Node](#) or participant identity fields
3. [Runtime Plane](#) context where applicable
4. Correlation identifiers
5. Timestamps
6. Lifecycle-state events
7. Processing outcomes
8. Warnings
9. Degraded operation
10. Failures
11. Recovery attempts
12. Command handling
13. Publication and subscription failures
14. Validation or processing failures
15. Relationship to audit and provenance records where applicable

Logging supports Health and Observability when it describes operational condition. Logging supports Audit and Provenance when it preserves information needed for review, replay, reconstruction, or [Evidence](#) planning. Logging supports Control Plane behavior when it records commands, acknowledgments, retries, recovery, or operational coordination.
