

# 17.1 Overview

## [Go To Phase 0 Implementation Governance](#)

The Phase 0 Implementation Governance Model defines how Phase 0 implementation artifacts are controlled, versioned, reviewed, changed, generated, and accepted into the implementation baseline.

Implementation governance preserves the relationship between the FX Demo Logical Profile and the Phase 0 implementation artifacts that realize it. It prevents implementation files, generated artifacts, configuration files, scripts, QoS profiles, or repository changes from altering logical meaning without review.

Implementation governance does not replace the Part 3 FX Demo Logical Governance Model. Part 3 defines logical governance. This section defines governance for Phase 0 implementation artifacts.
