

17.2 Implementation Ownership

Go To Phase 0 Implementation Governance

Phase 0 implementation ownership identifies responsibility for maintaining implementation artifacts and preserving their [traceability](#) to the applicable logical elements.

Implementation ownership applies to:

1. Hand-authored source files
2. IDL files
3. Generated artifacts
4. DDS Topic mappings
5. QoS profiles
6. Configuration artifacts
7. Scripts
8. Repository structure
9. Traceability artifacts
10. Developer Handbook content
11. Review checklists

Each governed implementation artifact must identify the responsible owner, owning role, or review authority according to the Developer Handbook and repository workflow.

Implementation ownership does not redefine logical ownership. Logical ownership remains governed by Part 3. Implementation ownership identifies who controls the Phase 0 artifact that realizes or supports the logical element.
