

19.1 Overview

This section defines the relationship between the Phase 0 Implementation Profile / PSM and the later [Deployment](#), Testability, and [Evidence](#) Plan.

Part 4 defines the implementation artefacts, mappings, conventions, and [Traceability](#) relationships that realise selected FX logical elements for Phase 0. Part 5 defines how those implementation artefacts are deployed, tested, observed, operated, and evidenced in the Phase 0 environment.

The boundary between Part 4 and Part 5 preserves separation of concerns. Part 4 defines what implementation artefacts exist and how those artefacts trace to the FX Demo Logical Profile. Part 5 defines how the Phase 0 environment uses those artefacts to support Deployment, runtime execution, testability, observability, acceptance, and Evidence.
