

19.7 Part 5 Handoff

[Go To Top](#)

[Return to Relationship to Deployment, Testability, and Evidence Plan](#)

Part 4 hands a controlled implementation [Baseline](#) to Part 5.

The Part 5 handoff includes:

1. Implementation [Node](#) mappings
2. [DDS](#) Topic mappings
3. [IDL](#) and generated type mappings
4. [QoS](#) profile mappings
5. [Runtime Plane](#) realisation
6. Interaction pattern realisation
7. [Repository](#) organisation
8. Script model
9. Developer Handbook requirements
10. Implementation governance rules
11. Implementation [Traceability](#) relationships

Part 5 uses this handoff to define [Deployment](#), testability, operation, [Observation](#), and [Evidence](#) for the selected Phase 0 implementation.

A later development phase may define a later implementation profile that extends, refines, supersedes, or replaces the Phase 0 Implementation Profile. The corresponding Deployment, testability, and Evidence plan must use the implementation Baseline selected for that later phase.
