

20.10 Phase 0 Does Not Define Later Phase Implementation Profiles

[Go To Top](#)

[Return to Phase 0 Implementation Rules and Constraints](#)

Phase 0 does not define later phase implementation profiles.

The Phase 0 Implementation Profile defines the selected Phase 0 [Baseline](#). It does not define the final implementation architecture for all development phases, and it does not implement the later Phase 2 [Policy And Release Plane](#) extension.

Later implementation profiles may extend, refine, supersede, or replace the Phase 0 Baseline. A later Phase 2 profile may add distributed policy enforcement, replicated policy decision capability, policy administration, policy information sources, local policy caches, metadata or aggregate view builders, release gateways, recipient-specific release products, release [Obligations](#), release [Evidence](#), additional policy topics or equivalent exchanges, and stronger sovereignty-aware or residency-aware release controls.

Phase 0 implementation choices must preserve [Traceability](#) and should not preclude those later extensions. However, later phase capabilities must not be treated as Phase 0 requirements unless this implementation profile is explicitly revised and re-baselined.
