

1.3 Intended Audience

[Go To Top](#)

[Return to Purpose and Scope](#)

This handbook is intended for developers, architects, reviewers, integration team members, demonstration participants, and project stakeholders who need to understand, create, run, inspect, or govern the Phase 0 implementation [Baseline](#).

The primary audience includes developers who will create or modify Phase 0 source code, generated [Artifacts](#), scripts, [Configuration](#) files, containers, and tests. These readers should use the handbook as the practical guide for [Repository](#) structure, naming, documentation, script behaviour, [Node](#) behaviour, logging, and error handling.

The audience also includes architects who need to verify that implementation Artifacts remain aligned with the Financial Systems [Archetype](#), the SIP-RA, the [FDIS-RA](#), and the FX Demo Logical Profile. For these readers, the handbook provides the implementation-facing [Evidence](#) that architectural concepts are being realised in a disciplined way.

Technical reviewers should use the handbook to inspect whether changes conform to the expected conventions. This includes reviewing Repository layout, file naming, generated Artifacts, [DDS](#) topics, Node [Lifecycle](#) behaviour, [Control Plane](#) reporting, script exit codes, logs, [Exception Handling](#), and acceptance Evidence.

Integration and demonstration team members should use the handbook to build, run, stop, observe, and troubleshoot the Phase 0 Node network. Project leads and stakeholders may use it to understand what Phase 0 proves, what it does not prove, and what must be completed before the September 2026 demonstration.

This handbook assumes that readers have a general technical background, but it does not assume that every reader is already familiar with DDS, [IDL](#), ACTUS, SBVR, SIP-RA, or FDIS-RA. Where those concepts are required, the handbook identifies the relevant source material rather than repeating the full architecture.
