

2.5 Relationship to the Phase 0 Implementation Source Material

[Go To Top](#)

[Return to Relationship to the Architecture Documents](#)

Part 4 identifies the source material for the Phase 0 implementation. It defines the selected technology and [Repository](#) context and provides the material to support implementation planning.

This handbook turns that source material into working guidance for developers and reviewers. It tells the team how to normalise the source material into the Repository, manage generated [Artifacts](#), run scripts, report [Node](#) status, build and run containers, and validate the [Baseline](#).

Part 4 answers this question: What implementation source material supports Phase 0?

This handbook answers this question: how should the team use that material to create a consistent Phase 0 executable Baseline?
