

19.6 Full Operational Dashboard

[Go To Top](#)

[Return to Phase 0 Non-Goals](#)

Phase 0 does not implement a full operational dashboard. It should provide enough observability for developers, testers, reviewers, and demonstration operators to inspect Node status, logs, [Control Plane](#) messages, container behavior, and [Evidence](#).

The team may use a command-line observer, simple Control Plane observer Node, DDS diagnostic tooling, logs, or captured Evidence. Those mechanisms prove observability at the baseline level but do not constitute a full dashboard.

Later phases may add a dashboard that displays Node state, message activity, alerts, health indicators, message flow, Evidence links, and operational summaries.
