

19.8 Enterprise Deployment

[Go To Top](#)

[Return to Phase 0 Non-Goals](#)

Phase 0 does not deliver an enterprise deployment model. It does not define final hosting, production infrastructure, enterprise network topology, operational support procedures, disaster recovery, incident response, change-management integration, or enterprise service management.

Phase 0 may use containers and scripts to run the demonstration baseline, but those mechanisms do not represent the final deployment architecture.

Later phases may define deployment environments, infrastructure automation, release processes, environment promotion, monitoring integration, operational controls, and enterprise governance.
