

Part 7: Governed Node Service Market

[Go to The FX Demo Root](#)

Financial Systems Archetype

Foreign Exchange (FX) Demo

Abstract

Part 7 defines the governed node service market for the Financial Systems Archetype. It describes how buyers, integrators, regulators, auditors, governance bodies, and service providers interact around governed node services. Part 7 explains the market motivation, stakeholder roles, non-functional characteristics, substitution concerns, compliance expectations, and service-selection concepts that support a distributed ecosystem of governed service providers. It extends the node-service architecture from Part 6 into a market-facing model that supports competition, accountability, auditability, and regulated adoption.

Notes for Editors

This document should be maintained as a set of linked wiki pages rather than a single monolithic page. Each major section should have its own stable URI so it can be referenced from other wiki pages, exported documents, presentations, AI-assisted tools, and semantic models.

Do not rename pages once they have been cited externally unless a redirect or move plan is in place.
