

Test Purpose

[Go up to Terms and Definitions](#)

Discussion

A **Test Purpose** identifies why a [Test](#) or related testing construct is performed.

The concept is aligned with the Test Information Interchange Format (TestIF), where Test Purpose provides a textual description of the reason for a test.

Within DIDO-TE, Test Purpose provides the semantic rationale for conducting testing and may be used to organize, select, govern, or interpret related Test Objects.

A Test Purpose is distinct from:

- a test objective, which may state a specific measurable outcome
- a [Requirement](#), which establishes a normative obligation
- [Validation](#) criteria, which determine how results are evaluated
- a [Test Set](#), which groups related Test Objects for the defined Test Purpose

Definition

The reason for performing a Test or grouping related Test Objects.

- Object Management Group, Test Information Interchange Format (TestIF) 1.0, `TestSet.testPurpose`
- [\[DTE4\] DIDO Reference Data Model](#)

Note

A Test Purpose describes the intended reason or motivation for testing rather than the procedure used to perform the Test.

Examples of Test Purposes may include:

- demonstrating conformance with a specified requirement
- evaluating interoperability between implementations
- determining whether a Node behaves correctly under a defined network condition
- evaluating performance under a specified workload
- verifying behavior following a state transition

- comparing two candidate implementations

A single Test Purpose may be associated with multiple Test Objects.

A [Test Set](#) may group related Test Objects that contribute to the same Test Purpose.

Example

For a Test Set containing Test Cases that evaluate Node behavior following loss and restoration of network connectivity, the Test Purpose may be:

Determine whether a Node maintains and restores the required operational behavior when network connectivity is interrupted and subsequently restored.

The individual Test Cases define specific conditions and actions used to evaluate that purpose.
